Plant Care and Warranty Information

We guarantee our plants for the first three (4) months after installation providing general care instructions are followed by the owner. This includes watering, weeding, fertilizing, and spraying for disease and insects.) It is important to water regularly for the first year after installation with the first few weeks being the most important. Water the root area of your new plants thoroughly every other day for the first week using a hose. Do not use a sprinkler. Then, water 3 times per week during the next six months. If we get a sufficient rainfall of at least a half inch you don't need to water for a couple of days. The best time to water is in the morning. Watering at night can cause some plants to get mildew and fungus. Deep watering is best.

Another key to the success of your landscaping is fertilization. Each plant is installed with a mixture of nutrients to last about 3 months. With all the watering that takes place in the first few months those nutrients get washed away pretty quickly. We use Agriform tablets. Some people prefer liquid fertilizer. Whatever you choose, be sure to follow the directions on the box, bag or bottle carefully and fertilize at the indicated times.

Our guarantee policy is for the purchase price of the plant; the labor is not included and will only be replaced once. Please let us know at the first sign of a problem. **Do not wait until the plant is dead.** Call us and we will be able to stop by and take a look. We do our best to plant your new landscape using top quality plants, soil, plant mix products and mulch. However, sometimes a plant dies for no apparent reason. We will replace it.

Unfortunately, we will not be able to replace plants due to weather related damage. We have no control over extreme conditions such as heat or freezing temperatures.

Thank you again for choosing HDS Landscaping.
